

DEXTER MONTERO

FULL STACK ENGINEER (BACKEND-FOCUSED)

Quezon City, Metro Manila | dexter.montero09@gmail.com | 0976 103 8160

SUMMARY

Full Stack Engineer with strong backend focus, experienced in building scalable API-driven systems using Fast API, Node.js (Express), and React (TypeScript). Proven ability to improve API performance by 30–40%, support systems handling 10,000+ daily requests, and deliver production-ready full-stack applications with independent frontend/backend deployments.

TECHNICAL SKILLS

Backend: Fast API, Node.js (Express, Fastify), Laravel/Lumen
Frontend: React, TypeScript
Databases: MySQL, MongoDB, Redis
DevOps/Cloud: Docker, Kubernetes (k3s), AWS EC2/S3, CI/CD, Vercel
Tools: Git, Swagger/OpenAI

PROJECTS

Humana HRIS – Full Stack HR System (Live | API Docs)

- Built full-stack HRIS using React (TypeScript) and Node.js (Express) for employee management and workflow operations
- Designed and documented REST APIs with Swagger for seamless frontend-backend integration
- Implemented RBAC authentication with JWT, refresh tokens, and role-permission middleware for HR workflows
- Integrated React frontend with paginated REST APIs, reducing dashboard load time via lazy loading and query optimization
- Deployed frontend and backend independently on cloud platforms

Auto Vault Motors – Vehicle Management Platform (Live)

- Developed full-stack system using React and Node.js (Fastify) for vehicle listing and management
- Built high-performance REST APIs with Fastify for optimized request handling
- Created dynamic frontend components for real-time data interaction
- Deployed scalable frontend and backend services independently

PROFESSIONAL EXPERIENCE

Backend Engineer (Acting Team Lead), Media Meter Inc. Jan 2025 to Present

- Optimized Fast API services handling 10,000+ daily requests, improving response times by 30–40%
- Built and maintained 15+ production REST APIs supporting core system functionality
- Refactored monolithic services into modular architecture for scalability and maintainability
- Conducted peer code reviews and supported junior developers on backend tasks
- Reduced production incident resolution time to under 2 hours
- Supported Docker + Kubernetes (K3s) deployment workflows

Junior Backend Developer, Media Meter Inc. Jan 2024 to Dec 2024

- Improved system performance by ~25% through backend optimization
- Developed REST APIs for production systems and feature delivery
- Resolved production issues and improved system stability
- Refactored legacy codebases for maintainability and scalability

Junior SQL Developer, We Support Inc. Nov 2022 to Jun 2023

- Developed optimized SQL queries for reporting and data processing
- Supported Unit Testing (UT) and System Integration Testing (SIT)
- Maintained documentation for data workflows

EDUCATION

Quezon City University 2018 to 2022
Bachelor of Science in Information Technology
